INTERNSHIPS

- **Research Intern, NYU Tandon** May '19 - July '19
Prof. Pawel Korus, Prof. Nasir Memon
 - Researched robust image hashes that are immune to typical image transformations, while being sensitive to malicious image edits such as face swaps, deep fakes, object addition/deletion.
 - Constructed models that take an image and output a binary hash that would give lower *Hamming distances* for hashes of similar images while giving more considerable distances for dissimilar images.
 - Developed a *framework* for testing against transformations like compression, contrast changes, blurring, warping.
 - Trained various novel network architectures on the *triplet loss* along with *mining* of examples for improved training.
 - Tested the networks against *adversarial attacks* such as *FGSM*, *Projected Gradient Descent*, *Boundary Attack*.
- **Research Intern (Remote), NYU Tandon** May '18 - July '18
Prof. Yao Wang <https://github.com/rharish101/Plasticity-Networks>
 - Researched *differentiable plasticity* for *domain transfer* in images using Convolutional Neural Networks.
 - Tested three architectures on the *Street View House Numbers (SVHN)* dataset: standard ResNet, ResNet with plasticity on the fully-connected layer and ResNet with plasticity on all layers, using 20 and 56 layer variants.
 - Improved *efficiency* in the temporal update rule for the *Hebbian weights* by using *transpose convolution*.
 - Achieved notable improvement in classification accuracy for the 20 layer models using full plasticity, when adapting models trained on the SVHN dataset for the MNIST dataset.
- **Intern, Machine Learning Team, New York Office of IIT Kanpur** May '17 - July '18
Prof. Manindra Agrawal
 - Developed an *online* text clustering model using a fully-online modification of the *DBSCAN* algorithm.
 - Implemented an *online* document vectorisation model based on the *Distributed Memory paragraph vectors* model.
 - Developed a *Word2Vec* model to identify duplicate documents using *Word Mover's Distance* on word vectors.
 - Trained a Convolutional Neural Network with sliding windows for English Optical Character Recognition (OCR).

PROJECTS

- **Improving GANs through Test-Time Constraints** Jan '19 - Present
Prof. Vinay Nambodiri, Prof. Chetan Arora <https://cse.iitk.ac.in/users/rharish/ugp2>
 - Pre-trained *Generative Adversarial Networks* (GANs) are fine-tuned using *interactive user input*, inspired by the iGAN paper and the paper Exploiting Test Time Evidence to Improve Predictions of Deep Neural Networks.

- The user provides sketches of edges on a single output of the generator and a *difference-of-Gaussians* based loss is backpropagated through the generator to fine-tune the generator's weights.
- A regularisation term in the loss prevents the weights from deviating away from the weights learned initially.

- **Multi-Agent GANs for Image Super-Resolution**

Aug '18 - Dec '18

Prof. Vinay Nambodiri

<https://cse.iitk.ac.in/users/rharish/ugp1>

- A *Multi-agent generalisation* of SRGAN inspired by MADGANs for image super-resolution in *TensorFlow*.
- Four generators (with shared lower layers) get the four corner sections of the input (with a slight overlap), and their outputs are joined (negating the overlap) to get the final high-resolution image.
- Each generator pairs with a discriminator, while a global discriminator acts on the final output.

- **Higher-Order Optimisation in Deep Learning**

Sept '18 - Nov '18

Prof. Piyush Rai, CS771A Course Project

<https://github.com/rharish101/CS771-Project>

- A survey on the use of *quasi-Newton methods* in deep learning as part of a course.
- Surveyed *Hessian-Free optimisation*, *AdaQN*, and *Sum of Functions Optimiser (SFO)*.
- Benchmarked Hessian-Free optimisation on an MLP against the *Adam* and *SGD* optimisers in *TensorFlow*.

- Tuned model hyperparameters using the *Tree of Parzen Estimators* method from the *Hyperopt* library.
